Heavy Roll

The 3-4 mm thin concrete roll with a distinct three-dimensional effect

This abrasive and discernibly structured surface features natural concrete and stone components with a sublime play of colors and shades, which represents the material's finely weathered history.

HeavyRoll is a quick & easy way to transform plain walls into uniquely adorned surfaces.

Environmentally friendly

- minimal transport effort because of the low weight and relatively compact size
 - naturally occurring raw materials
 - manual production to avoid the use of pollutive machinery
-  made in Germany

HEAVY ROLL NEW YORK

HeavyRoll was inspired by a wide variety of natural templates.

Our goal is to make these reproduced surfaces accessible to a design-oriented clientele. The entirely handmade structures of saw-rough boards, textured surfaces such as metal, stone or fancy structures similar to a crocodile design are all availab-

le as a flexible roll. The support of the roll is a thin fiberglass mat coated with a mineral substance.

At the core of the roll is a support mat, which provides stability.

Five variants NEW YORK we offer:

HR-01 Heavy Roll New York
Narrow planking - concret grey
approx. 3.00 x 1.00 m / planking in 10 cm

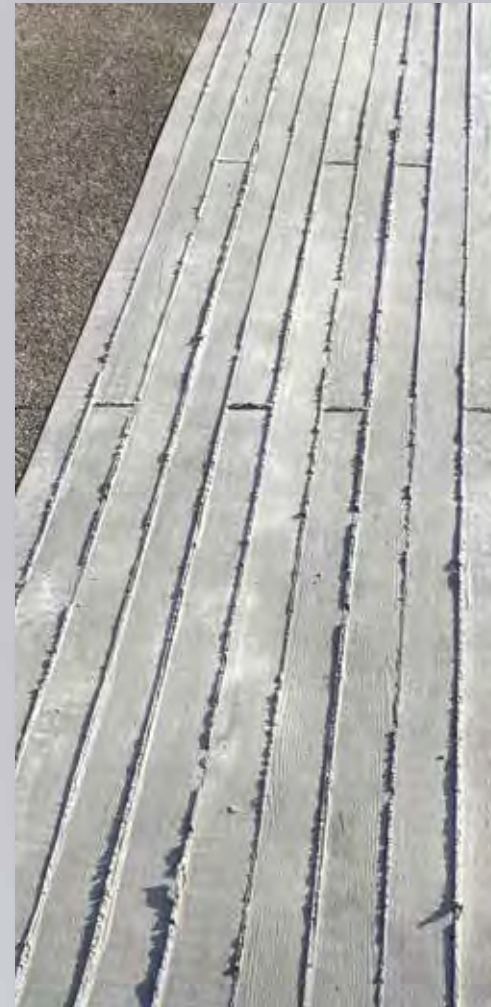

HR-03 Heavy Roll New York
Wide planking - konkret grey
approx. 3.00 x 1.00 m / planking in 20 cm

HR-04 Heavy Roll New York
Narrow plank, mixed width - concret grey
ca. 3.00 x 1.10 m / planking 10 and 20 cm

HR-02 Heavy Roll New York
Narrow plank, mixed lengths / concret grey
ca. 3.00 x 1.00 m / planking in 10 cm

HR-01A Heavy Roll New York
Narrow planking concret anthracite
ca. 3.00 x 1.00 m / planking in 10 cm

HEAVY ROLL PALM TREE

HEAVYROLL RUST

These rust surfaces are naturally produced by rust corrosion and can be customized with various patterns.

The possibilities are virtually only limited by your imagination.

All patterns shown here were specially designed for certain projects to meet every customer's individual demands.

The maximal thickness possible is 4 mm and dependent on the design of the rust surface.

HEAVY ROLL POMPEII

Fire plank – burnt wood as a roll

Our new highlight is the reproduction of a traditional technique of Japanese art of building: Yakisugi.

However, you can get the supposedly charred wood surfaces from us rollable on a web of about 3.00x 1.00 m and only about 2-4 mm thick.

The look of the Yakisugi wood, which is known at Stones-likeStones under the term POMPEII, is absolutely free of burning odor and can be used without hesitation in the interior as a modern wall covering.

HR-08 POMPEII

VENEZIA

Here you can see our Venezia design with its arabesque patterns.

Despite this material's thickness of 3-4 mm, HeavyRoll is highly flexible and easy to install.
